

# The correct number of photovoltaic panels connected in series

## Overview

---

This means you can usually connect between 8 to 14 panels in series. ⚠ Always use the open-circuit voltage (Voc) rating of your solar panels, and apply a temperature correction factor if your area experiences low temperatures (cold weather increases Voc). Solar panels are wired in series when you want to increase the total voltage in a system. In this configuration, the voltage outputs of all panels add up while the current remains low on a level of what a single solar panel can provide. The increased voltage in a series connection reduces power loss ( $P = I^2R$ ) and minimizes voltage drop, improving efficiency over long wire runs.
