

The photovoltaic panel charging status icon flashes

Overview

The panel icon tells you if your solar panel is connected and producing power. A steady light usually means everything's working perfectly. But if it's blinking, your system might be getting low input—often due to cloudy weather, shading, or a loose connection. ". Solar Charge Controller blinking can indicate either normal processes happening or something went wrong. So you have to make sure your system. The LED indicator can only show the status of the system by lighting up and changing color, it does not show as much information as the display, but it is very intuitive and you can tell at a glance whether the system is working or not. It indicates whether the battery is fully charged, running well, or losing power and needs to be charged in time.
