

The photovoltaic power inverter keeps turning red

Overview

A red light could mean a range of things: a temporary glitch, a false alarm (also called a nuisance trip), a utility grid hiccup, or even a software update in progress. In many cases, it's just your system's way of letting you know it noticed something out of the ordinary. This could relate to input voltage variations, 3. An internal. A red light display on an inverter can be confusing and at the same time raise concerns. Is it the power supply?

The battery?

Or is there something else?

Before you take the inverter to a repair shop, you might want to try the following. Most power inverters are fitted with some visual and audible indicators to communicate the operational state of the inverter. The audible sound of the cooling fans running is another cue.
