

Three-phase transaction of mobile energy storage containers for base stations

Overview

This paper presents results and observations from field deployment of multiple MBESS based on real-world evaluation of NWA use cases involving temporary powering of customer facilities for scheduled maintenance, planned extended outages, and seasonal peak load management. Mobile energy storage systems, classified as truck-mounted or towable battery storage systems, have recently been considered to enhance distribution grid resilience by providing localized support to critical loads during an outage. It is a crucial flexible scheduling resource for realizing large-scale renewable energy. Three-phase mobile energy container for of a mobile vehicle, battery system and power conversion system.
