

# What are the terms for photovoltaic panel energy supply

## Overview

---

Photovoltaics (PV): Devices that convert solar energy into electricity using semiconductors (this conversion is called the photovoltaic effect). Solar panels are photovoltaics and make up a PV system. Power output/rating: The number of watts a solar panel produces in ideal conditions. Expressed as a sine wave, the current of AC passes through zero when it changes direction, which makes it a safer. Whether you're shopping for home solar panels, solar panels for your business, or a community solar project, knowing these terms will help you go solar with confidence. Most homeowners save around \$60,000 over 25 years Gigawatt (GW): We measure the cumulative capacity of community solar nationwide. The following is a listing of terms used primarily in the PV industry, but some general and solar heating terms are also included. absorbers --Dark-colored objects that soak up heat in thermal solar collectors. active solar heater --A solar water or space-heating system that moves heated air or.
