

What does solar PV power generation mean

Overview

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone). Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind. PV installations may be ground-mounted, rooftop-mounted, wall-mounted or floating. The mount may be fixed or use a solar tracker to follow the sun across the sky. An individual PV cell is usually small, typically producing about 1 or 2 watts of power.
