

# What energy storage do solar and wind power use

## Overview

---

Solar and wind facilities use the energy stored in lead batteries to reduce power fluctuations and increase reliability to deliver on-demand power. Sometimes two is better than one. Coupling solar energy and storage technologies is one such case. The reason: Solar energy is not always produced at the time. Batteries can provide highly sustainable wind and solar energy storage for commercial, residential and community-based installations. As the cost of solar and wind power has in many places dropped below fossil fuels, the.
