

# What is a green mobile base station

## Overview

---

Cellular base stations powered by renewable energy sources such as solar power have emerged as one of the promising solutions to these issues. This article presents an overview of the state-of-the-art in the design and deployment of solar powered cellular base stations. As cellular networks continue to expand throughout the developing world, mobile base stations are increasingly located in rural areas that are often difficult to reach and not connected to electrical grids. Thus, identifying. China Mobile is dedicated to becoming a leading force behind China's leapfrog development of science and technology, making active contributions to the building of "Digital China". In many areas of rural zones, disaster-prone regions, or developing countries, the grid is unstable or absent. And while diesel generators are still in use, they come with high fuel costs, maintenance burdens, and.
