

What kind of photovoltaic panels should restaurants use

Overview

The key is choosing panels that suit your roof, your budget, and the realities of a busy kitchen. REC Alpha Pure-R What It Is. Solar power has become a viable option for restaurant owners and operators because of its positive impact on the bottom line. When buildings have the ability with solar panel rooftops to create their own electricity and store it, it can significantly reduce, if not potentially eliminate, food waste. According to the National Restaurant Association, a typical restaurant uses approximately 38 kilowatt-hours (kWh) of electricity and 111 cubic feet of natural gas per square foot annually, resulting in thousands of dollars in monthly utility expenses that directly impact their bottom line. The absence of any negative impacts when generating electricity using solar panels is. As a supplier of commercial use solar systems, I've been frequently asked whether these systems are suitable for restaurants.
