

# What solution does BESS Telecom Energy Storage use

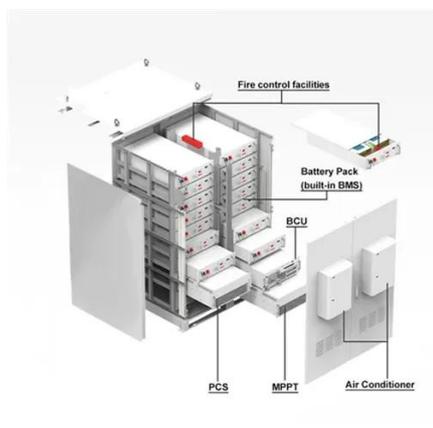

## Overview

---

The advancements in battery technology have been pivotal in making BESS a viable solution for modern telecom infrastructure. Battery energy storage systems (BESS) offer an innovative solution to address power outages and optimize backup power reliability. This use case explores the application provider which operates a network of cell towers. BESS paired with solar panels or small wind turbines provides a sustainable and cost-effective alternative to diesel-based systems. Therefore, the industry needs a solution that distributes or stores continuous, reliable electricity to the site, regardless of the local grid's condition, before any power outage event occurs. We call it pushing storage to the edge (i. e. Reduced Diesel Dependence: Store and use clean energy, lowering.
