

Who is responsible for the loss of photovoltaic panels stolen

Overview

Department of Energy reports that approximately \$1 billion worth of copper is stolen annually from various locations, including solar farms. Who is responsible for the system's maintenance?

Who insures the panels?

If a fire breaks out in the array and causes damage to the roof/building, who is liable?

If the system was installed under a power purchase. According to Spotter Global, theft from solar farms was expected to rise throughout 2024, with growing demand for panels making them both easier to sell and more valuable to steal. This certainly seemed to be the case, as between January and August 2024, there were at least 70 reported offences. The U. 8 million dollars worth. SolRiver has managed multiple theft incidents, and those experiences have shaped a practical and repeatable response framework. The objective is not simply to replace stolen material, but to restore operational control, protect revenue and reduce the likelihood of repeated exposure. Establish. The Dutch Association of Insurers, a representative body in one of the markets currently most plagued by solar crime according to Higgins, updated its website earlier this year to include an advice section for solar asset owners concerned about the risks of copper theft at their sites. Detectives placed bids and won the panels, and arrested the man when he tried to complete the transaction.

Who is responsible for the loss of photovoltaic panels stolen

Loss Control and Underwriting Considerations

Liability -- Some businesses lease their roof space to contractors that install PV systems for other customer's use. These arrangements create a few questions regarding liability in case of a loss.
