

Why do companies install photovoltaic panels and batteries

Overview

The integration of batteries into solar installations represents a significant advancement in how a company manages its solar energy production and consumption. These devices allow the storage of excess energy generated by photovoltaic panels during the day for later use. During the day, solar energy technologies and power plants do not produce air pollution or greenhouse gases when operating. Using solar energy can have a positive, indirect effect on the environment when solar energy replaces or reduces the use of other energy sources that have larger effects on the environment. Solar radiation may also be converted directly into electricity by solar cells, or photovoltaic cells, or harnessed to cook food in specially designed solar ovens, which typically concentrate sunlight from over a wide area to a central point. Is solar energy renewable?

Yes, solar energy is. Generac Solar & Battery Solutions provide a more powerful, resilient and smart way to manage your energy needs. With rising electricity costs and an aging grid, it's time for a reliable solution that gives you the power to use energy on your own terms. This allows for a wide range of applications, from small residential roof-top systems up to utility-scale.
